

## Contemporary insect control with maximum useful light output...

With a contemporary and unique aesthetic, **allure™** provides advanced efficacy by maximising the UV light output of the high efficiency *Synergetic™* tubes. As the first zapper flykiller to allow light out from the front, back, sides and top of the unit, **allure™** is proven to have over 60% more useful UV light output than traditional flykillers utilising the same power UV tubes.

Once the flying insect has been attracted to **allure™** by the increased light output, the unique 'Z Shape' killing grid provides a 20% larger killing area with which to zap flies. The killing grid, deep catch tray and UV tubes can be easily cleaned and serviced due to the tool free swing down front guard, which also holds the catch tray during servicing.

### Features...

Innovative open top design

- Maximum possible UV light output for increased efficacy

Unique 'Z Shaped' killing grid

- 20% larger useful killing area for increased efficacy

Deep, mains interlocked catch tray with anti blow out folds

- Large capacity for caught insects

High efficacy *Synergetic™* UV tubes

- Patented technology with dual wavelength output for an increased catch

Tool free, swing down front guard

- For simple and quick servicing, with full access to consumable parts

Three way mounting for flexible installation

- Simple wall, ceiling or desk mounting with no extra parts

Independent certification

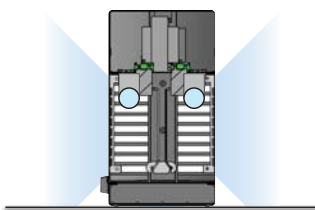

- Independently tested and certified to RoHS and all relevant European standards

Complete peace of mind

- Three year guarantee (Excluding tubes and starters)

### Specification...

Part No.	Model	Dimensions(mm)	Coverage	Tubes	Weight
ZC010	allure 30	590 x 305 x 120	120m <sup>2</sup>	2x15W	4.0Kg
